

# FISH

## **brown bullhead**

*(Ameiurus nebulosus)*

**DISTRIBUTION & ABUNDANCE:** Common, however experts believe this species has suffered a 50% reduction in occurrences compared to historic records. Abundance is unknown.

**ASSOCIATED LANDSCAPE FEATURES:** nearshore; ponds; small lakes; medium lakes; large lakes; trophic status: eutrophic; trophic status: mesotrophic; cool medium rivers; warm medium rivers; cool large rivers; warm large rivers; gradient: slow; rock substrates; rock substrates; soft substrates; clay substrates; vegetation; turbid water; clear water

**ASSOCIATED THREATS:** other biological interactions (hybridization)

**COMMENTS:** Sampling effort to obtain population estimates needs to be determined. This species may also be known by the name *Ictalurus nebulosus*.
