

BIRDS

Boreal Chickadee

(*Poecile hudsonica*)

DISTRIBUTION & ABUNDANCE: Present only in the Upper Peninsula, the southern edge of the Boreal Chickadee's range is found in Michigan. Two scattered, disjunct populations exist within the State: one in the Western Upper Peninsula, the other in the Eastern Upper Peninsula. This is a relatively uncommon species, and BBS data indicate a declining trend in populations.

ASSOCIATED LANDSCAPE FEATURES: mesic hardwood; lowland conifer; mesic conifer; fen; swamp; Great Lakes island; snag/cavity

ASSOCIATED THREATS: lack of scientific knowledge; unknown

COMMENTS: this species was also known by the name *Parus hudsonicus*. A threats assessment is needed for this species.
