This cultivation area was cut winter 2024/2025. The site was initially left unplatable due to a significant number of oversized wp logs that would not fit through the chipper and were left behind as well as significant slash. Chip crew came back in summer of 2025 and chipped sale again. Anything that wouldn't fit through the chipper was skidded to the edges of of retention islands and stand boundaries (away from planting area). Scattered wolfy wp left scattered through stand will need to be planted around.
