

Compartment Review Presentation

Cadillac Forest Management Unit

Compartment 63003

Entry Year 2028

Acreage: 3,046

County: Lake

Management Area: Cadillac Moraines

Stand Examiner: James Park

Legal Description:

T20N, R12W, Sec. 10, 11, 14, 15, 22, 23, and 26

Identified Planning Goals:

Each cover type in the Cadillac Moraine Management Area has a unique age class and basal area class goals that describe the long-term desired future conditions. The harvest levels that are needed in the first planning period to begin achieving those long-term goals are summarized in the State Forest Management Plan. These harvests will help establish a desirable amount of regeneration for the even-aged cover types over the 10-year period or help to achieve desired basal area distribution among uneven-aged cover types like northern hardwoods. Implementing these silvicultural regimes will yield 249,625 cords, the planned harvest volume for the decade. Vegetation management in the Lake County Moraines management area will provide forest products; maintain or enhance wildlife habitat; protect areas of unique threatened, endangered and special concern species and provide for forest-based recreational uses. Timber management for this 10-year planning period will focus on balancing the age class distributions of aspen and regenerating red pine and oak. Wildlife habitat management objectives include perpetuating early-successional communities for species adapted to young forests for hunting and other wildlife-related recreation opportunity. Expected trends within this 10-year planning period are increased recreational pressure (including illegal off-road vehicle impacts) and the need to successfully regenerate and establish oak.

Soil and topography:

Hilly with some steep slopes. Soils are excessively drained sands with Rubicon and Montcalm being the most common.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

This compartment is continuous state land ownership. There is State Land to the east and west of the compartment with federal land to the north and private to the south.

Unique Natural Features:

The Michigan Natural Features Inventory lists Virginia Bluebells as having occurred in the compartment. The Great Plains Spittlebug, Eastern Box Turtle, Goshawk, Red-shouldered Hawk, Loons, Eagle, Bigmouth Shiner, and Dusted Skipper are listed as having occurred in sections surrounding the compartment. The compartment has the potential for the Goshawk, Red-shouldered Hawk, and Eastern Box Turtle.

Archeological, Historical, and Cultural Features:

No known Archeological, Historical, and Cultural Features.

Special Management Designations or Considerations:

None at this time.

Watershed and Fisheries Considerations:

The Pine River flows just to the east of Compartment 3. The Pine River is a Designated Trout Stream with naturally reproducing populations of brook, brown, and rainbow trout. It is also a State-Designated Natural River. There are several small, unnamed spring tributaries to the Pine that originate in Compartment 3; however no treatments are planned near them.

Wildlife Habitat Considerations:

Featured wildlife species are deer, ruffed grouse, turkey, marten and hare. Management emphasis for these species will include maintenance of aspen, conifer components of stands, mature stands as travel corridors, and openings complexes. Timber sale specifications to benefit these featured species (where applicable) will include brush pile creation along lowland edges, protection of mast-bearing wildlife shrubs and ironwood, protection of standing dead snags, retention of large diameter trees, and creation of drumming logs (1-2 per acre) and woody debris (tops or whole trees) in aspen cuts. (Victory, 5/24/16)

Mineral Resource and Development Concerns and/or Restrictions

Sections 10-11, 14-15, 22-24, & 26, T20N R12W, Lake Co. No known potential exists for commercial production of metallic minerals in this part of the state. No active sand/gravel operations are known to exist in the area. There may be some potential for sand, and minor gravel, within the compartment, but potential for development seems low. The closest hydrocarbon production, past or present, is more than three miles away. There is no active leasing involving State-owned oil & gas rights in the area, and there has been no recent well permit activity in the vicinity. Potential for future oil & gas development within the compartment is considered low at this time. The State does not own all the mineral rights within the compartment. Because the mineral estate is the dominant estate, the surface owner must provide the owner of the mineral rights reasonable access to the surface for mineral exploration and development.

Vehicle Access:

A forest road access plan is detailed on the compartment map. Identified are state and county roads as well as forest roads and trails under the jurisdiction of the DNR. Also indicated are forest roads and trails under the jurisdiction of the DNR that are proposed for abandonment. These roads were determined to be in excess of the access needs in the area, are a threat to the resources, or are a concern environmentally.

Survey Needs:

Recreational Facilities and Opportunities:

The Lincoln Hills motorcycle trail, Lincoln Hills Route, Michigan Cross Country Cycle Trial (MCCCT), and snowmobile trail #35 are located within this compartment. Trail protection specifications should be considered if forest treatments impact these trails.

Fire Protection:

The terrain would allow for good access for suppression equipment. Many trails within would allow for equipment except along the rivers. Remote camping will add to possible ignition starts of wildfires.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**
