

# Compartment Review Presentation

Cadillac Forest Management Unit

Compartment 63086

Entry Year: 2027

Acreage: 2,560

County: Missaukee

Management Area: High Sand Plains

---

**Stand Examiner:** Andrew Krugh

## **Legal Description:**

T24N, R6W, Sec. 1,2,3,10,12

## **Identified Planning Goals:**

Vegetation management in the Manistee River Valley management area (MA) will provide timber products; maintain or enhance wildlife habitat; protect areas of unique character including the Manistee River and its tributaries, a designated natural river; threatened, endangered and special concern species; and provide for forest-based recreational uses. Timber management for this 10-year planning period includes continuing aspen management to maintain early successional habitat for hunting and other wildlife-related recreational opportunities; increasing regeneration of oak; focusing on balancing the red pine age class structure through final harvests and re-planting; and on improving red pine quality through partial harvests. Expected trends within this 10-year planning period are increased recreational pressure, especially on the established trails and along the Manistee River and its tributaries; an increased wildland/urban interface and a need to restore barrens communities through prescribed fire; and invasive plant control.

## **Soil and topography:**

Montcalm-Grayling, Rubicon sands. Mostly level terrain with many wet areas.

## **Ownership Patterns, Development, and Land Use in and Around the Compartment:**

Solid sections of state land with the exception of Horseshoe lake on the west half of section 2. This private land contains cabins and some full time residences. Limited fishing in flooded area. Hunting, ORV use and snowmobile trail are the main forms of recreation.

## **Unique Natural Features:**

Massasauga and wood turtle potential near cannon flooding. Also listed as potential species include great blue heron, osprey, eagle and assorted turtles.

## **Archeological, Historical, and Cultural Features:**

Woodland mounds and Late Woodland camp listed within compartment.

## **Special Management Designations or Considerations:**

Continue to maintain age class diversity. Monitor and encourage oak regeneration where possible.

## **Watershed and Fisheries Considerations:**

Big Cannon Creek is a designated stream under the Upper Manistee River State Natural Rivers Zoning. Under the Upper Manistee River Natural River Plan, Big Cannon Creek has special protection (see page 41 of the plan), where no cutting may be done closer than 100 feet from the river's edge, subject to seasonal, wetland, and topographic restrictions.

## **Wildlife Habitat Considerations:**

About half of this compartment is made up of lands purchased with restricted State Game Fund, Deer Range Improvement Fund. This compartment contains Cannons Creek #2 Flooding SWMA. This area previously included a tube and dike impoundment. Numerous reptiles, amphibians, various waterfowl, and other bird species are associated with the flooding and associated wetlands now returned to natural/beaver dominated processes since the man-made dam was removed. Uplands provide valuable year-round deer habitat. Bear, bobcat, beaver, ruffed grouse, woodcock, and turkeys utilize this area. The south square mile of the east part of the compartment is part of the Eastern Massauga Rattlesnake Management area. The goal of maintaining various timber types and age classes, maintaining the impoundments, and manipulating the blueberry and shrub component associated with the grassland and upland brush type will continue to benefit a wide variety of game and non-game species. Featured species of special interest are eastern massasauga rattlesnake, American bittern, mallard, ruffed grouse, and deer. Timber sale specifications to benefit wildlife (where applicable) will include brush pile creation along lowland edges, protection of mast-bearing wildlife shrubs and ironwood, protection of standing dead snags, and creation of drumming logs (1-2 per acre) and woody debris (tops or whole trees) in aspen cuts. (E. Victory 6/2015) (V. Richardson 2/2025)

## **Mineral Resource and Development Concerns and/or Restrictions**

Surface sediments consist of ice-contact and glacial outwash sand and gravel and postglacial alluvium. The glacial drift thickness varies between 200 and 600 feet. Beneath the glacial drift is the Mississippian Michigan Formation. The Michigan Formation is quarried for gypsum in other areas of the State. A gravel pit is located to the north and gravel potential appears to be good on the uplands. East Norwich Field is located three miles to the east. The field has produced over 15.9 million BO and 15.7 Bcf gas from the Devonian Richfield Formation. It is in secondary recovery operations currently. There are no State lands currently leased in the Compartment

#### **Vehicle Access:**

A forest road access plan is detailed on the compartment map. Identified are state and county roads as well as forest roads and trails under the jurisdiction of the DNR. Also indicated are forest roads and trails under the jurisdiction of the DNR that are proposed for abandonment. These roads were determined to be in excess of the access needs in the area, are a threat to the resources, or are a concern environmentally. Proposed new roads or roads recommended for substantial improvement are noted below.

#### **Survey Needs:**

Survey corners are established through out the compartment. The actual private lines will need to be run for sale set up.

#### **Recreational Facilities and Opportunities:**

Numerous motorized recreational trails are located within this compartment. The Mis-Kal route, North Missaukee ORV trail, (maximum 50" width) North Missaukee Cycle trail, Michigan Cross Country Cycle trail (MCCCT), and Snowmobile trail #6 are all located within this compartment. Trail protection specifications should be included in any timber sale potentially impacting these trails. Specifically, appropriate measures identified in DNR Policy and Procedures "32.22XX" (Best Management Practices for Forest and Wildlife Management Adjacent to Recreation Trails) should be taken into consideration when setting up timber sales within this compartment. The area also has some Wildlife Flooding areas, which provide hunting and fishing opportunities. There is also dispersed camping in the area. (T.M.N. 12/16/14)

#### **Fire Protection:**

There is some private land in the compartment which provides Urban Interface problems. There are some low areas which could cause difficult access for suppression equipment. There are some small pine areas with mixed hardwoods.

#### **Additional Compartment Information:**

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**
