

Compartment Review Presentation

Gwinn Forest Management Unit

Compartment 32290

Entry Year: 2027

Acreage: 1,035

County: Marquette

Management Area: Menominee-Marquette

Stand Examiner: John Hamel

Legal Description:

T47N-R23W, sections 25, 36.

T47N-R22W, section 30.

Identified Planning Goals:

Habitat/vegetation and mixed use.

Soil and topography:

Glacial drainage ways, till plains, and ground moraines form topography that is nearly level to moderately steep. Soils are very poorly drained nonacid organic soils, poorly drained loamy soils, well drained loams, and poorly drained loams.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

Mostly private ownerships. To the east are larger corporate land holdings. Land use is primarily for forest production and passive recreation.

Unique Natural Features:

The area is composed primarily of vernal forest. The headwaters to the East Branch of the Sand River and other waterways occur in this compartment.

Archeological, Historical, and Cultural Features:

Remnants of old logging camps are common in this landscape.

Special Management Designations or Considerations:

Management operations will largely be limited to winter to protect the soils and prevent site damage.

Watershed and Fisheries Considerations:

Fisheries Concerns: This compartment contains reaches of the Sand River which is a designated trout stream above County Road 480. The Sand River contains native Brook Trout and receives a run of Steelhead in the spring. Stand 15 is proposed for single tree selection around the Sand River tributary. These small tributaries can serve as vital nursery habitat for juvenile Brook Trout and Steelhead. A 100-foot, plus 5 feet per 1% increase in slope, Riparian Management Zone is recommended to protect these areas in accordance with BMP's. The southern portion of this compartment is limited due to wetland areas, but if work is ever decided to be completed here, the designated trout stream buffer should be adhered to.

Wildlife Habitat Considerations:

This compartment is found within the Menominee-Marquette Management Area, on ground moraines in northern Dickinson and southern Marquette Counties. The dominant Natural Communities are mesic northern forest, poor conifer swamps, and dry mesic northern forest. Major forest cover types include Aspen, Northern Hardwoods, and Mixed Lowland Conifers. Almost every cover type and associated species can be found within the management area including several deer wintering complexes. This management area provides some of the finest grouse and woodcock hunting in the Midwest and this is a wildlife management priority that will continue. Wildlife management issues in the management area are early successional forest conditions (associated with alder, riparian zones, or forested wetlands); mast (hard and soft); habitat fragmentation; mature forest (upland deciduous, especially aspen and mixed forest with little understory); coarse woody debris; and deer wintering complexes. The following have been identified as featured species for the Menominee-Marquette Management Area: American Woodcock, Blackburnian Warbler, Cerulean Warbler, Golden-winged Warbler, Black-backed Woodpecker, Ruffed Grouse, Turkey, American Marten, Snowshoe Hare, White-tailed Deer, Black Bear.

Mineral Resource and Development Concerns and/or Restrictions

No known potential exists for commercial oil & gas production in this part of the state. The closest known active

sand/gravel operation is less than two miles east. Potential for development of sand & gravel within the compartment appears to be limited. No past metallic mineral mining has occurred in this area, and there has been no known ground-based exploration. Potential for metallic and/or critical minerals beneath the compartment is relatively unknown but is considered low at this time. There is no current mineral leasing activity involving State-owned mineral rights in the area.

Vehicle Access:

Access good to the compartment but is somewhat limited internally.

Survey Needs:

No survey needs are foreseen.

Recreational Facilities and Opportunities:

There is no developed recreation in this compartment. The heaviest public use is for hunting and trapping.

Fire Protection:

Fire occurrence is low in this area due to the wet nature of the landscape.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class
- Cover Type by Harvest Method
- Proposed Treatments – No Limiting Factors
- Proposed Treatments – With Limiting Factors
- Stand Details (Forested and Nonforested)
- Dedicated and Proposed Special Conservation Areas
- Site Condition Details

The following information is displayed, where pertinent, on the attached compartment maps:

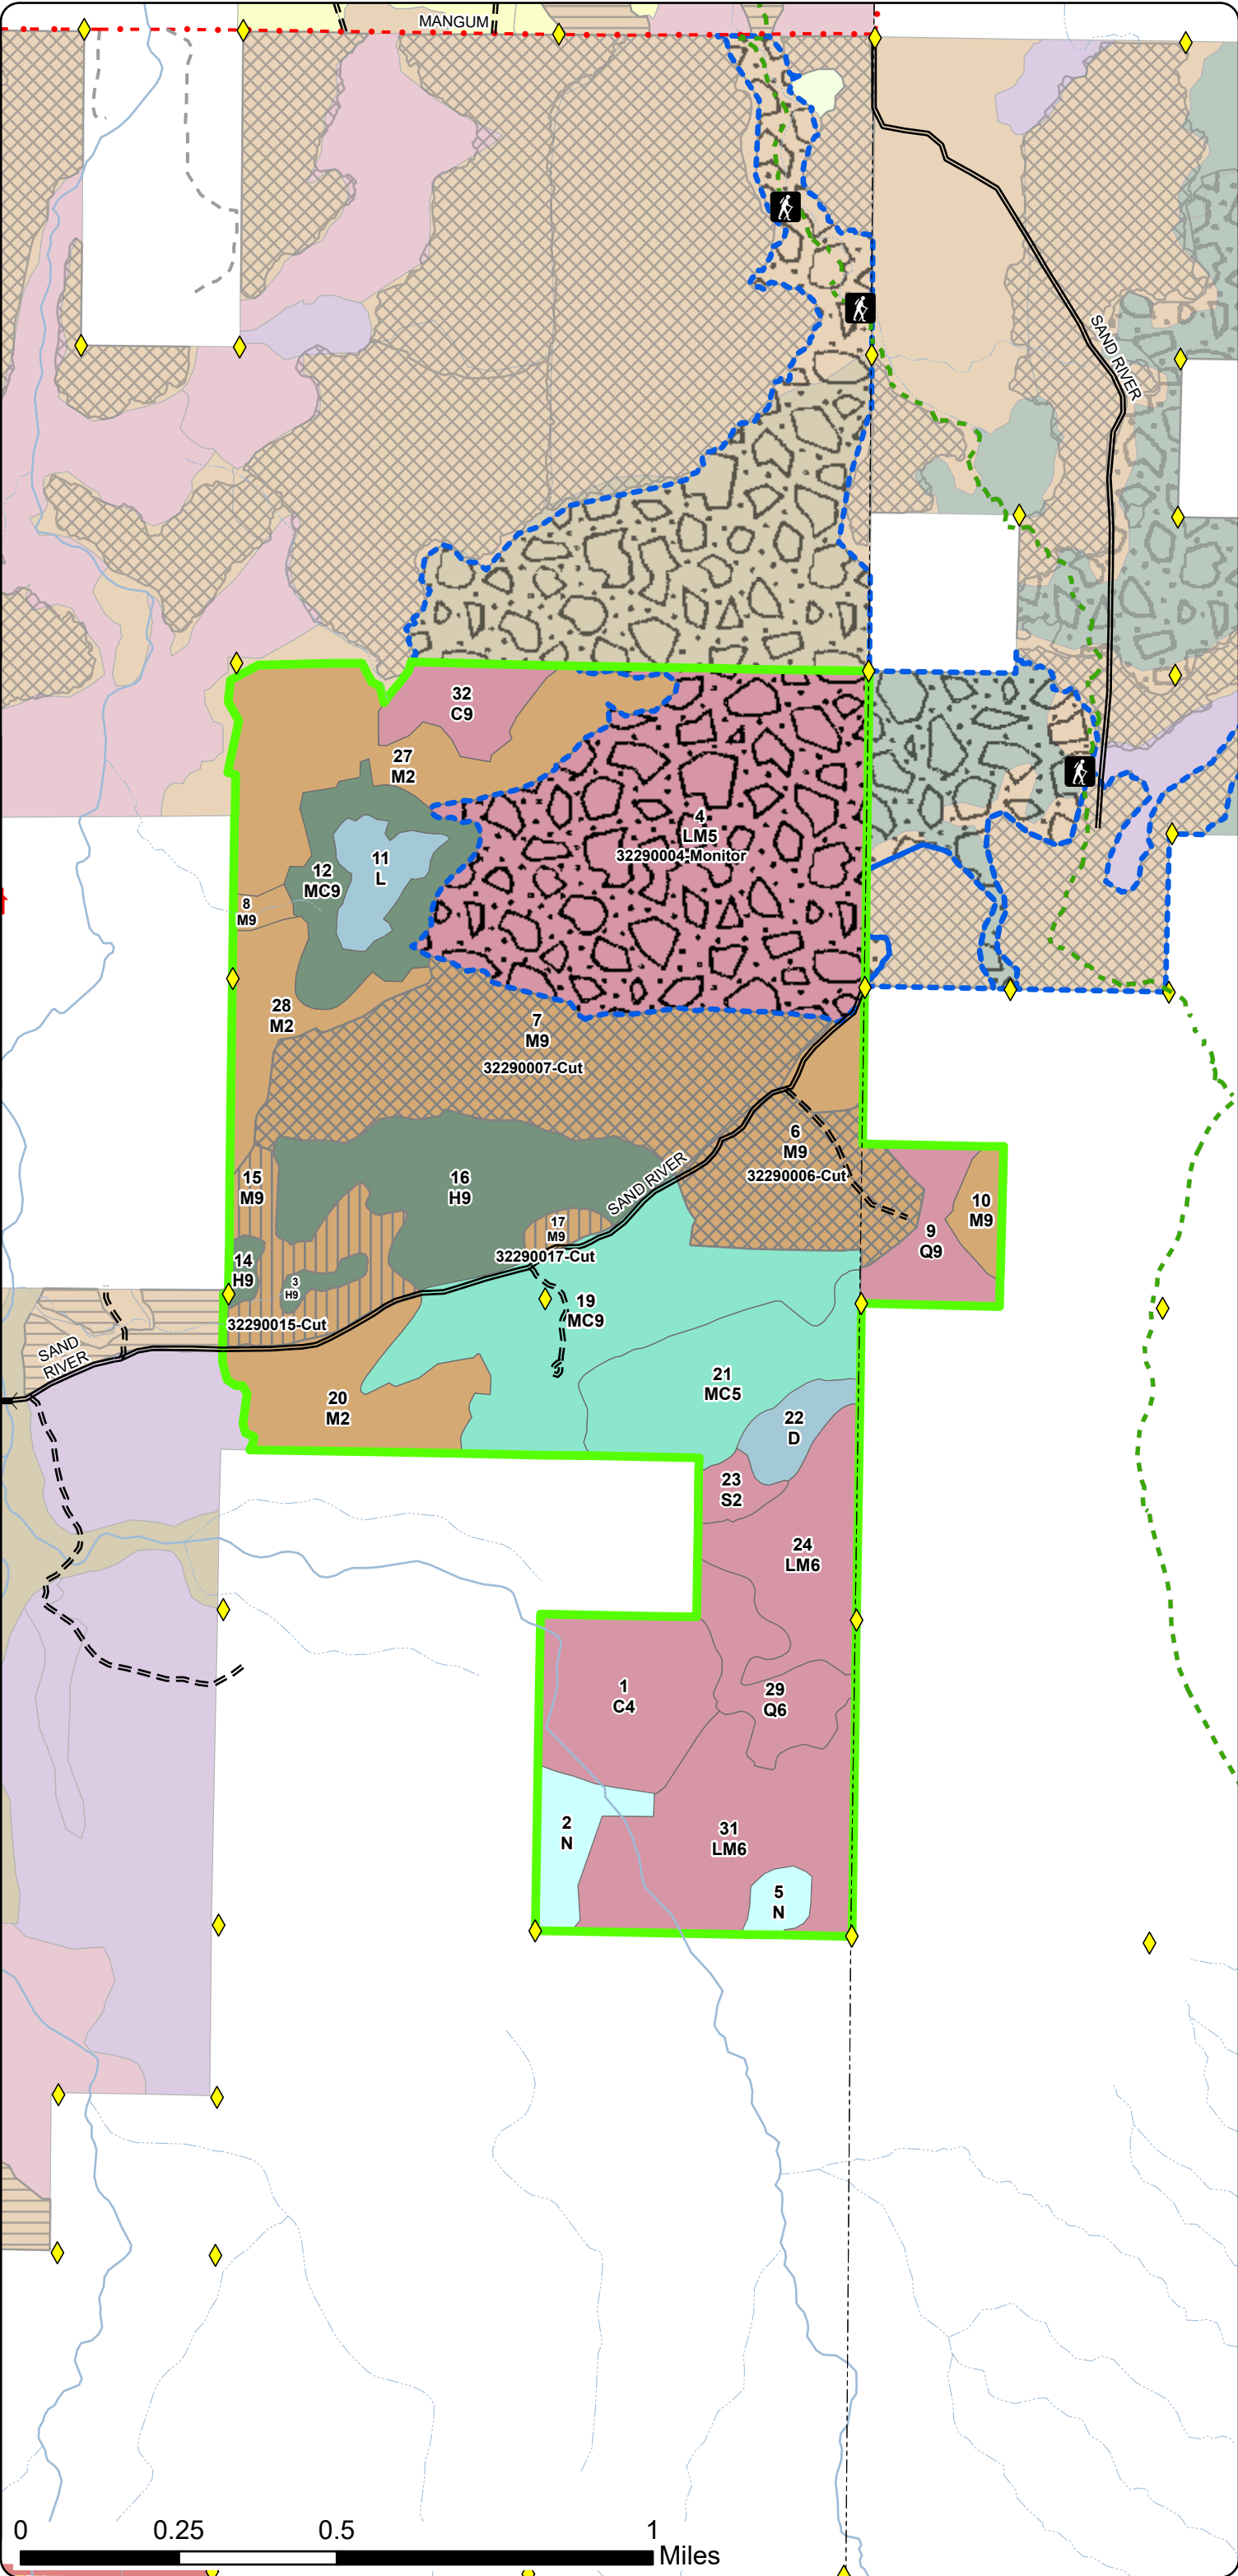

- Base feature information, stand boundaries, cover types, and numbers
- Proposed treatments
- Site condition boundaries
- Details on the road access system
