

Compartment Review Presentation

Newberry Forest Management Unit

Compartment 42116

Entry Year: 2026

Acreage: 2,451

County: Luce

Management Area: Seney Lake Plain

Stand Examiner: Matt Payment

Legal Description:

T46N R9W Sections 1-4, 10-13

Identified Planning Goals:

Recreation, timber, and wildlife are the main uses of this area. The goal is to manage for all of these simultaneously and to provide, enhance and perpetuate their uses.

Soil and topography:

The soil in this compartment is mostly made up of a complex of sandy soils mixed in with level lowland peat soils. The southeastern portion of the compartment is a complex of sand/clay soils. The compartment is mostly comprised of low, wet cover types varying from treed bogs and lowland brush to cedar and swamp conifer. Most of the uplands in this compartment are on sand ridges that support jack pine, spruce, and white/red pine or aspen stands. Some of the richer upland sand/clay type soils support maple, beech, yellow birch, hemlock and white pine associations. Current day vegetation patterns mimic those recorded during pre-settlement times.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

The compartment has a mix of ownership within its boundaries. The land is predominately state owned with inclusions of private land ownership. Land surrounding the compartment has mixed ownership as well. It is predominantly state owned on the south side while being mixed on the north on east sides. Large corporate land owners, as well as other private ownership, predominately hold the land along the north and east boundaries. The compartment is currently used for an assortment of recreational opportunities such as hunting, snowmobiling and wildlife viewing. There are a fair amount of camps on the private land in and around the compartment. The corporate private land is primarily used for timber production. Much of the area within the compartment is difficult to access due to remoteness and lowland nature.

Unique Natural Features:

Great Blue Heron rookeries have been noted within the compartment by MNFI in 1978.

Archeological, Historical, and Cultural Features:

No Archeological, Historical, or Cultural Features known.

Special Management Designations or Considerations:

The wildlife habitat lends itself to high use for various types of hunting in the compartment. Management decisions should promote and enhance characteristics such as age class diversity and species diversity to sustain these recreational opportunities in the compartment.

Watershed and Fisheries Considerations:

The Auger River bordering the southern edge of the compartment is primarily a warmwater stream providing nursery areas for game fish and forage species of the Tahquamenon River. Gimlet Creek passes through the northeastern corner of the compartment and is a cold stream. To protect these streams in accordance with BMPs, a minimum 100-foot, plus 5 feet per 1% increase in slope, riparian management zone is recommended.

Wildlife Habitat Considerations:

Compartment 116 lies in the Seney Lake Plain Management Area. Auger Creek makes up the southern border of the compartment. The compartment is mostly comprised of low, wet cover types varying from treed bogs and lowland brush to cedar and lowland conifer. A few drier spots and ridges support jack pine, spruce, and white pine or aspen stands. Excellent wildlife travel corridors exist along lowlands and streams. Current day vegetation patterns mimic those recorded during presettlement times. Forested corridors should be maintained to facilitate ease of movement between upland and lowland areas. Buffer zones along streams and rivers should be sustained to preserve travel corridors and wetland wildlife values and habitats. Wildlife objectives will be achieved by the retention of hard and soft mast producing trees, wildlife den and nest trees and snags in harvested stands and the preservation of conifer components in upland stands. White-tailed deer, fisher, black bear, American marten, snowshoe hare, moose, and gray wolf are noteworthy wildlife species using this compartment.

Mineral Resource and Development Concerns and/or Restrictions

No known potential exists for commercial oil & gas production in this part of the state, and there is no known potential for occurrences of commercial deposits of metallic or critical minerals in this area. No active sand/gravel pits are known to exist in the area. The compartment is dominated by low wetlands, which would inhibit surface mining, even if potential for aggregate resources exist. Furthermore, the compartment might be too far from populated areas (commercial markets) for any aggregate resources present to have much economic value beyond limited use by the county road commission, areas (commercial markets) for any aggregate resources present to have much economic value beyond limited use by the county road commission, logging companies, or DNR for local road maintenance. No current State mineral leasing activity exists in the area.

Vehicle Access:

Access is very limited due to private land ownership, gates and the minimal amount of roads within the compartment. The main access to this compartment is the Charcoal Grade. It is gated on the north and south ends of the compartment on the borders of the private land ownership. The Charcoal Grade is a major snowmobile trail leading to and from Newberry. During snowmobile season, the private landowners open the gates to allow access for snowmobiling.

Survey Needs:

Recreational Facilities and Opportunities:

Trail #45 (The Falls Snowmobile Trail) runs along the Charcoal Grade through the compartment. Other recreational opportunities would include hunting, hiking and wildlife viewing.

Fire Protection:

Fires in this compartment should remain small except in times of increased drought because of lowland cover types. Access to fires will be poor because of lack of roads, soft ground and swamp conifer types. Risk to private property should be low.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**
